The Chemistry of Drug Discovery and Lead Optimization

Edited by William Greenlee and Manoj Desai

3 **William Greenlee & Manoj Desai**
Editorial overview

4 **Hugo Kubinyi**
Structure-based design of enzyme inhibitors and receptor ligands

16 **Hugo Kubinyi**
Combinatorial and computational approaches in structure-based drug design

28 **Jonathan D Hirst**
Predicting ligand binding energies

34 **Paul L Wood**
Peptoid drug discovery: The choice of scaffolds for combinatorial chemistry/HTS and subsequent substitutions for parallel synthesis/lead optimization

41 **Daniel L Flynn, Rajesh V Devraj & John J Parlow**
Recent advances in polymer-assisted solution phase chemical library synthesis and purification

51 **János Pitlik**
Combinatorial and solid-phase approaches towards β -lactams and related compounds

59 **John Richard Morphy**
Linkers for solid-phase organic synthesis

66 **Lawrence M Kauvar & Edgardo Laborde**
The diversity challenge in combinatorial chemistry

71 **Alan L Harvey & Peter G Waterman**
The continuing contribution of biodiversity to drug discovery

77 **Marcel Jaspars & Linda A Lawton**
Cyanobacteria – a novel source of pharmaceuticals

85 **Grace R Nakayama**
Microplate assays for high-throughput screening

92 **Diana C Hill**
Trends in development of high-throughput screening technologies for rapid discovery of novel drugs

98 **Nathaniel S Finney**
Fluorescence assays for screening combinatorial libraries of drug candidates

106 **Alexey V Eliseev**
Emerging approaches to target-assisted screening of combinatorial mixtures

116 **Steven S Bondy**
The role of automation in drug discovery

The cover

Shows the discovery of the first effective anti-ulcer drug from histamine (top) through burimamide and metiamide to cimetidine. This illustration was provided by SmithKline Beecham plc.
