## The Chemistry of Process Development

Edited by Chris Cimarusti & Pat Confalone

---

256 **Chris Cimarusti & Pat Confalone**  
Editorial overview

257 **Ralph N Landau, Thomas J Blacklock, Michael J Girgis & Anthony Tedesco**  
The role of chemical engineering in pharmaceutical chemical process development

264 **Reinhard Ditz, Michael Schulte & Jochen Strube**  
Simulated moving bed chromatography technology in pharmaceutical new product development - its impact on the industry's race to the market

272 **James J Lalonde**  
Application of cross-linked enzyme crystals as selective catalysts for synthesis

278 **Jon D Stewart**  
Baker's yeast reductions in asymmetric synthesis

290 **Aleksey Zaks & David R Dodds**  
Biotransformations in the discovery and development of pharmaceuticals

304 **Zhaoda Zhang & Jin-Yan Tang**  
Recent advances in scale-up of modified oligodeoxynucleotides

314 **John S Ng & Ravindra S Topgi**  
Biocatalytic process for optically active  $\beta$ -amino acids

329 **Peter GM Wuts**  
Semisynthesis of Taxol

338 **David Askin**  
The synthesis of indinavir and other clinically useful HIV-1 protease inhibitors

349 **Richard D Tillyer & Edward JJ Grabowski**  
Enantioselective acetylide additions: Practical syntheses of non-nucleoside reverse transcriptase inhibitors

358 **Robert J Chambers**  
Synthetic approaches to second generation antagonists of leukotriene B<sub>4</sub>

## The cover

Shows the ball and stick representation of the structure of Taxol and its <sup>13</sup>C NMR spectrum by Andrew SR Featherstone (<sup>13</sup>C NMR spectrum kindly provided by Peter GM Wuts).
