The Chemistry of Biological Products

Edited by James McAlpine, David Ecker & Alfredo Romano

Editorial overview

- 166 Post genomics – From antibody production to small molecule discovery**
Alfredo Romano, James McAlpine & David Ecker

Reviews

- 168 Technical challenges facing therapeutic cancer vaccines**
Stephen Ward, John Copier & Angus Dalgleish
- 178 Monoclonal antibodies against components of the IGF system for cancer treatment**
Yang Feng & Dimiter S Dimitrov
- 186 Advances in polyketide synthase structure and function**
Steven G Van Lanen & Ben Shen
- 196 Signaling mechanisms of GPCR ligands**
Philip G Strange
- 203 Solid-phase synthesis of siRNA oligonucleotides**
Serge L Beaucage
- 217 Delivering silence: Advancements in developing siRNA therapeutics**
Tatiana I Novobrantseva, Akin Akinc, Anna Borodovsky & Antonin de Fougères
- 225 Progress toward safe and effective gene therapy for β -thalassemia and sickle cell disease**
Jeffrey Lebensburger & Derek A Persons
