The Management of Chemical and Biological Information

Edited by Peter Gund, Ed Maliski & Frank Brown

296 Peter Gund, Ed Maliski & Frank Brown

Editorial overview: Mining the genome for gems

297 Russ B Altman

Genetic sequence data for pharmacogenomics

304 Jan Freudenberg

Genome-wide prediction of disease-relevant genes and variants

310 James B Golden

Prioritizing the human genome: Knowledge management for drug discovery

317 George Marnellos

High-throughput SNP analysis for genetic association studies

322 Dana Haley-Vicente & David J Edwards

Proteomic informatics: *In silico* methods lead to data management challenges

333 Anoop Grewal, Jordan Stockton & Catherine Bolger

Tools for discovery: Gene expression enterprise solutions

339 Yingyao Zhou & Ruben Abagyan

Algorithms for high-density oligonucleotide array

346 Patrick Durand, Claudine Médigue, Anne Morgat, Yves Vandenbrouck, Alain Viari & François Rechenmann

Integration of data and methods for genome analysis

353 Oren M Becker, Sharon Shacham, Yael Marantz & Silvia Noiman

Modeling the 3D structure of GPCRs: Advances and application to drug discovery

362 David M Gange & Joseph D'Antuono

The use of electronic reaction databases in process chemistry

370 Thierry Langer & Eva Maria Krovat

Chemical feature-based pharmacophores and virtual library screening for discovery of new leads

377 Mariana Vaschetto, Tina Weissbrod, Dorothy Bodle & Osman Güner

Enabling high-throughput discovery

384 Zhaoying Xiang, Yaning Yang, Xiaojing Ma & Wei Ding

Microarray expression profiling: Analysis and applications

396 Darren R Flower

Databases and data mining for computational vaccinology
