## The Management of Chemical and Biological Information

Edited by Peter Gund, Ed Maliski & Frank Brown

---

283 Peter Gund, Ed Maliski & Frank Brown

Editorial overview: Can drug discovery be industrialized?

285 Kewel K Jain

Applications of biochips: From diagnostics to personalized medicine

290 Gerit Müller-Hagen, Thomas Beinert & Anette Sommer

Aspects of lung cancer gene expression profiling

304 Jordi Mestres

Computational chemogenomics approaches to systematic knowledge-based drug discovery

314 Richard K Scott

Exploiting the potential of knowledge management in R&D and drug discovery: Extracting value from information

318 S Stanley Young & Nanxiang Ge

Design of diversity and focused combinatorial libraries in drug discovery

325 Patrick Jimonet & Robert Jäger

Strategies for designing GPCR-focused libraries and screening sets

334 Alan J Barrett

Bioinformatics of proteases in the MEROPS database

342 Kenneth Lundstrom

Structural genomics on membrane proteins: The MePNet approach

347 Philip M Dean, David G Lloyd & Nikolay P Todorov

*De novo* drug design: Integration of structure-based and ligand-based methods

354 Ellen R Laird & James F Blake

Structure-based generation of viable leads from small combinatorial libraries

360 Volker Patzel

*In silico* selection of functional RNA molecules
